

**Supplementary Figure 3.** Resting-state functional connectivity (RSFC) in healthy controls and patients during spontaneous visual field defect (VFD) recovery. Circular representation of RSFC between regions of interest (ROIs; Supplementary Figure 2) are shown. See Supplementary Figure 2 for the ROIs in the Circos plot. (A) Age-matched healthy controls (n=15) and (B) VFD patients (n=32) within 1 week, and at 1 and 3 months after stroke (left to right), respectively. IL, ipsilesional hemisphere (i.e., left half of the Circos); CL, contralesional hemisphere (i.e., right half of the circus).
