

**Supplementary Table 1.** Relation between infarct volumes, migraine activity, and pain severity

Variable	Median (IQR)	<i>P</i>
Migraine		1.000
Active migraine	9.06 (1.47–12.14)	
Inactive migraine	8.50 (3.15–19.45)	
VAS*		0.637
<7	9.06 (1.47–15.89)	
≥7	8.50 (1.28–17.14)	

Data were obtained from a subgroup of 35 patients. Active migraine was defined as at least one migraine attack in the year prior to index stroke; inactive migraine was defined as personal history of migraine but no migraine attacks in the year prior to index stroke.

IQR, interquartile range; VAS, visual analogic scale.

\*Self-reported pain intensity, ranging from 0 (no pain) to 10 (maximum pain severity).
