**Supplementary Figure 1.** Forest plot showing late window adjusted effect for favorable clinical functionality (mRS 0–2) at 90 days in pre-specified groups. mRS, modified Rankin Scale; OR, odds ratio; CI, confidence interval; p_het, heterogeneity P-value; ASPECTS, Alberta Stroke Program Early Computed Tomography Score; IV, intravenous; ICA, internal carotid artery.

**Supplementary Figure 2.** Forest plot showing early vs. late window adjusted effect for sICH and PH2 in pre-specified groups. sICH, symptomatic intracranial hemorrhage; PH2, parenchymal hematoma type 2; OR, odds ratio; CI, confidence interval; p_het, heterogeneity P-value; ASPECTS, Alberta Stroke Program Early Computed Tomography Score; IV, intravenous; ICA, internal carotid artery.
