
Supplementary Figure 1. Imaging phenotypes of covert brain infarction. The arrows indicate representative lesions of the corresponding covert brain infarction imaging phenotypes. (A) Cavitatory infarction on FLAIR. (B) Acute cerebral infarction on DWI. (C) Chronic infarction: combined gray and white matter lesions on T2-weighted and FLAIR images. (D) Chronic infarction: large subcortical non-cavitated infarcts on FLAIR images. FLAIR, fluid-attenuated inversion recovery; DWI, diffusion weighted imaging.
