
Supplementary Figure 7. Cumulative incidence of stroke recurrence by SO_2 quartile after exclusion of major port cities. Cumulative incidence curves for stroke recurrence within 1 year after discharge by quartiles of the 3-month average post-discharge SO_2 concentration: (A) excluding Incheon, Ulsan, and Busan (n=23,511); (B) excluding Incheon (n=27,208); (C) excluding Busan (n=25,041); (D) excluding Ulsan (n=25,954). All-cause mortality was treated as a competing risk. *P*-values were derived using Gray's test. SO_2, sulfur dioxide.
